

## Overview

### Useful For

Aiding in the diagnosis of joint disease, systemic disease, inflammation, malignancy, infection, and trauma

### Reflex Tests

Test Id	Reporting Name	Available Separately	Always Performed
LCMS	Leukemia/Lymphoma, Phenotype	Yes	No
CYTNG	Cytology Non-GYN	Yes	No

### Testing Algorithm

When abnormal cytologic features are present, a miscellaneous cytology test may be added and performed at an additional charge. Additionally, leukemia/lymphoma phenotyping by flow cytometry may also be added to aid in the review. Fee codes for these tests vary depending on review process.

### Method Name

Automated or Manual Cell Count/Cytocentrifugation followed by Manual Differential and Morphology Review

### NY State Available

No

## Specimen

### Specimen Type

Body Fluid

### Shipping Instructions

Specimen must arrive within 24 hours of collection.

### Necessary Information

Indicate specimen source

### Specimen Required

#### For Local Accounts Only

**Sources:** Synovial, pleural, peritoneal, pericardial fluid

#### Container/Tube:

**Preferred:** Body fluid container

**Acceptable:** Lavender top (EDTA) or green top (heparin)

**Specimen Volume:** 1 mL

### Specimen Minimum Volume

0.5 mL

### Reject Due To

Gross hemolysis	OK
Clotted	Reject
Diluted specimens	Reject
Specimens from sources other than those listed	Reject

### Specimen Stability Information

Specimen Type	Temperature	Time	Special Container
Body Fluid	Ambient (preferred)	24 hours	
	Refrigerated	24 hours	

### Clinical & Interpretive

#### Clinical Information

Body fluids, other than the commonly analyzed urine and blood, include synovial, pleural, peritoneal, and pericardial fluids. These fluids may be present in increased volumes and may contain increased numbers of normal and abnormal cells in a variety of disease states.

#### Reference Values

TOTAL NUCLEATED CELLS

Synovial fluid: <150/mcL

Peritoneal/pleural/pericardial fluid: <500/mcL

NEUTROPHILS

Synovial Fluid: <25%

Peritoneal/pleural/pericardial fluid: <25%

LYMPHOCYTES

Synovial fluid: <75%

MONOCYTES/MACROPHAGES

Synovial fluid: <70%

---

## Interpretation

Trauma and hemorrhage may result in increased red blood cells (RBC) and white blood cells (WBC); RBC predominate.

WBC are increased in inflammatory and infectious processes:

- Neutrophils predominate in bacterial infections
- Lymphocytes predominate in viral infections
- Macrophages may be increased in inflammatory and infectious processes
- Eosinophils may be increased in parasitic or fungal infections

## Cautions

No significant cautionary statements

## Performance

### Method Description

The cells are applied to a glass slide by cytocentrifugation. Wright-Giemsa stained slides are examined by light microscopy and a differential is performed. Total nucleated cell count is determined using an automated hematology analyzer or a microscopic counting chamber.(Instruction manual: Automated Hematology Analyzer XN series [XN-1000]. Code No. CJ410539. North American Edition. Sysmex; 11/2015)

### PDF Report

No

### Day(s) Performed

Monday through Sunday

### Report Available

1 to 2 days

### Specimen Retention Time

1 week

### Performing Laboratory Location

Mayo Clinic Laboratories - Rochester Main Campus

## Fees & Codes

### Fees

- Authorized users can sign in to [Test Prices](#) for detailed fee information.
- Clients without access to Test Prices can contact [Customer Service](#) 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact [Customer Service](#).

### Test Classification

This test has been modified from the manufacturer's instructions. Its performance characteristics were determined by Mayo Clinic in a manner consistent with CLIA requirements. This test has not been cleared or approved by the US Food and Drug Administration.

### CPT Code Information

89051-Cell count with differential

### LOINC® Information
