

T-Helper Cell Type 1 Cytokine Panel, Plasma

## Overview

### **Useful For**

Assessment of plasma cytokine levels to understand the etiology of autoimmune and proinflammatory conditions when used in conjunction with clinical information and other laboratory testing

#### **Method Name**

Bead-Based Multiplex Immunoassay

### **NY State Available**

Yes

# **Specimen**

# **Specimen Type**

Plasma EDTA

## **Specimen Required**

**Supplies:** Sarstedt Aliquot Tube, 5 mL (T914) **Collection Container/Tube:** Lavender top (EDTA)

Submission Container/Tube: Plastic vial

**Specimen Volume:** 0.5 mL **Collection Instructions:** 

- 1. Immediately after specimen collection, place the tube on wet ice.
- 2. Within 2 hours of collection, centrifuge at 4 degrees C, 1500 x q for 10 minutes and aliquot plasma into a plastic vial
- 3. Freeze immediately.

#### **Additional Information:**

- 1. Plasma for this test cannot be shared with other tests. Submit specimen for this test in its own vial.
- 2. This test cannot be added on to a previously collected specimen.

### Specimen Minimum Volume

0.3 mL

## Reject Due To

Gross	Reject
hemolysis	
Gross lipemia	Reject
Gross icterus	Reject
Heat-treated	Reject
specimen	

T-Helper Cell Type 1 Cytokine Panel, Plasma

## **Specimen Stability Information**

Specimen Type	Temperature	Time	Special Container
Plasma EDTA	Frozen	21 days	

# **Clinical & Interpretive**

### **Clinical Information**

Cytokines are important mediators of cell-to-cell communication within the innate and adaptive immune systems. The expression of most cytokines is highly regulated, and generally occurs in response to foreign or self-antigenic stimulation. The functions of cytokines are extremely varied, with many cytokines also displaying pleiotropic effects, depending on their cellular target. As a group, cytokines and their receptors represent a highly complex and critical regulator of a normal immune response.

### **Reference Values**

TNF:

<18 years: Not established > or =18 years: <10.0 pg/mL

IFN-gamma:

<18 years: Not established > or =18 years: <60.0 pg/mL

IL-2:

<18 years: Not established > or =18 years: <60.0 pg/mL

IL-2 receptor alpha soluble: <18 years: Not established > or =18 years: < or =959 pg/mL

IL-12p70:

<18 years: Not established > or =18 years: <200 pg/mL

## Interpretation

Elevated cytokine concentrations could be consistent with the presence of infection or other inflammatory process.

# Cautions

Results from cytokine testing should not be used to establish or exclude a specific diagnosis.

Cytokine testing should only be used in conjunction with clinical information and other laboratory testing as part of a patient's overall assessment.

T-Helper Cell Type 1 Cytokine Panel, Plasma

Normal concentrations of cytokines do not exclude the possibility of infection or other inflammatory condition.

Cytokine concentrations could be affected by immunomodulatory agents.

#### **Performance**

### **Method Description**

Testing for plasma cytokine levels is accomplished using a laboratory-developed immunoassay. (Unpublished Mayo method)

# **PDF Report**

No

### Day(s) Performed

Thursday

### **Report Available**

2 to 8 days

### **Specimen Retention Time**

14 days

T-Helper Cell Type 1 Cytokine Panel, Plasma

# **Performing Laboratory Location**

Mayo Clinic Laboratories - Rochester Superior Drive

### **Fees & Codes**

### **Fees**

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact <u>Customer Service</u>.

### **Test Classification**

This test was developed and its performance characteristics determined by Mayo Clinic in a manner consistent with CLIA requirements. It has not been cleared or approved by the US Food and Drug Administration.

## **CPT Code Information**

83520 x5

### **LOINC®** Information

Test ID	Test Order Name	Order LOINC® Value
