

**Overview****Reflex Tests**

Test Id	Reporting Name	Available Separately	Always Performed
FANTP	ANA Titer and Pattern	No	No
FCA70	Repeat Anti Scl-70	No	No

**Testing Algorithm**

If Anti-Scl-70 Ab is  $\geq 20$ , Repeat Anti Scl-70 Is performed at an additional charge. If Anti-Nuclear Ab by IFA is positive, reflex test ANA Titer and Pattern is added at no additional charge.

**Method Name**

RIPA Gel Radiography

Immunofluorescence Antibody

Enzyme-linked immunosorbent assay (ELISA)

**NY State Available**

Yes

**Specimen****Specimen Type**

Serum

**Specimen Required**

**Collection Container/Tube:** 10 mL Red

**Submission Container/Tube:** Plastic vial

**Specimen Volume:** 3 mL

**Acceptable:** SST

**Collection Instructions:** Draw blood in a plain red-top tube(s), serum gel tube is acceptable. Spin down and send 3 mL of serum refrigerated in a plastic vial.

**Specimen Minimum Volume**

1 mL (volume does **not** allow for repeat testing)

**Reject Due To**

Gross hemolysis:	Reject
Thawing:	Warm OK; Cold OK

Gross lipemia:	Reject
Gross icterus	Reject
Other:	Anything other than serum; bacterial contamination

### Specimen Stability Information

Specimen Type	Temperature	Time	Special Container
Serum	Refrigerated (preferred)	14 days	
	Ambient	7 days	
	Frozen	60 days	

### Clinical & Interpretive

#### Clinical Information

Anti-U1 RNP Abs can be found in 2-14% of limited SSC and 5% of diffuse SSC. They are associated with isolated pulmonary arterial hypertension, arthritis and esophageal dysfunction. Anti-Th/To Abs are present in 2-6% of patients with limited SSC and are rarely found in diffuse SSC. They have specificity and are associated with isolated pulmonary arterial HTN, pulmonary fibrosis and renal crisis.

Anti-U3 RNP (Fibrillarin) Abs are highly specific for diffuse SSC with a sensitivity of 4-10%. They are associated with isolated arterial hypertension, myositis, renal and cardiac manifestations of SSC.

Anti-PM/SCL Abs are found in 25% of Scleroderma/myositis overlap, 10% of idiopathic inflammatory myopathy and 2% of Scleroderma cutaneous changes and ILD.

Anti-RNA Polymerase III Abs are useful in the diagnosis of SSC and for the identification of patients at risk for developing renal crisis, progressive skin thickening and cancer. The prevalence of IgG RNAP III antibodies is 20-35% in diffuse SSC and 9% in limited SSC.

#### Reference Values

Anti-Nuclear Ab by IFA, Anti-U3 RNP(Fibrillarin), Anti-Th/To Ab:

Reference Range: Negative

Anti-Centromere Ab:

Reference Range: <1:40

Anti-SCL-70 Ab:

Reference Range: <20

Anti-RNA Polymerase III, Anti-U1RNP Ab, and Anti-PM/Sci-100 Ab:

Reference Range: <20

Negative: <20 units

Weak Positive: 20-39 units

Moderate Positive: 40-80 units

Strong Positive: >80 units

## Performance

### PDF Report

No

### Day(s) Performed

Monday through Friday

### Report Available

14 to 25 days

### Performing Laboratory Location

Esoterix Endocrinology

## Fees & Codes

### Fees

- Authorized users can sign in to [Test Prices](#) for detailed fee information.
- Clients without access to Test Prices can contact [Customer Service](#) 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact [Customer Service](#).

### Test Classification

This test was developed and its performance characteristics determined by LabCorp. It has not been cleared or approved by the Food and Drug Administration.

### CPT Code Information

86038  
83516  
86235 x 5  
86256
