

## Overview

#### **Useful For**

Diagnosis of Legionnaires disease

## **Reflex Tests**

Test Id	Reporting Name	Available Separately	Always Performed
RMALD	Ident by MALDI-TOF mass	No, (Bill Only)	No
	spec		
ISAE	Aerobe Ident by	No, (Bill Only)	No
	Sequencing		
TISSR	Tissue Processing	No, (Bill Only)	No

## **Testing Algorithm**

When this test is ordered, the reflex tests may be performed at an additional charge.

#### Method Name

Conventional Culture Technique

#### NY State Available

Yes

## Specimen

#### **Specimen Type**

Varies

#### **Additional Testing Requirements**

Because examination by rapid polymerase-chain reaction (PCR) increases sensitivity and provides faster results, it is strongly recommended to also order LEGRP / *Legionella* species, Molecular Detection, PCR, Varies.

## **Necessary Information**

Specimen source is required.

#### Specimen Required

Specimen Type: Lower respiratory Sources: Bronchoalveolar lavage, bronchial aspirate/brushing/lavage/washing, tracheal/endotracheal secretions/aspirate, sputum Container/Tube: Sterile container Specimen Volume: Entire collection

# **Test Definition: LEGI**

Legionella Culture, Varies

Specimen type: Fresh tissue or biopsy
Sources: Lung, pleura, heart valve, pericardium
Container/Tube: Sterile container
Specimen Volume: 5 mm(3)
Collection Instructions: Aseptically collect a 1 to 2 cm(3) piece of tissue whenever possible

Specimen type: Fluid Sources: Pericardial, pleural, chest, chest tube drainage, thoracentesis, empyema Container/Tube: Sterile container Specimen Volume: 2 mL

#### Forms

If not ordering electronically, complete, print, and send a Microbiology Test Request (T244) with the specimen.

#### **Specimen Minimum Volume**

See Specimen Required

#### Reject Due To

All specimens will be evaluated at Mayo Clinic Laboratories for test suitability.

#### Specimen Stability Information

Specimen Type	Temperature	Time	Special Container
Varies	Refrigerated	48 hours	

# Clinical & Interpretive

## **Clinical Information**

The Legionellaceae are ubiquitous in natural freshwater habitats, allowing them to colonize artificial water supplies (eg, reservoirs), which may then serve as the source for human infections.

Legionella pneumophila and the related species, Legionella bozemanii, Legionella dumoffii, Legionella gormanii, Legionella micdadei, Legionella longbeachae, and Legionella jordanis have been isolated from patients with pneumonia (Legionnaires disease). The organism has been isolated from lung tissue, bronchoalveolar lavage, pleural fluid, and sputum. The signs, symptoms, and radiographic findings of Legionnaires disease are generally nonspecific.

#### **Reference Values**

No growth of Legionella species after 7 days of incubation

#### Interpretation

Identification of *Legionella* species from respiratory specimens provides a definitive diagnosis of Legionnaires disease.

Organisms isolated are identified as *Legionella* species via matrix-assisted laser desorption/ionization time-of-flight (MALDI-TOF) mass spectrometry and/or 16S ribosomal RNA (rRNA) gene sequencing.

# **Test Definition: LEGI**

# Cautions

Although semi-selective media is utilized, recovery of *Legionella* in specimens heavily contaminated with indigenous microbiota (ie, sputum) may be difficult.

# Performance

# **Method Description**

Specimens are cultured on buffered charcoal-yeast extract-based media. Colonies may appear within a few days; however, cultures are incubated for 7 days before issuing a negative report. Positive specimens will be identified via matrix-assisted laser desorption/ionization time-of-flight (MALDI-TOF) mass spectrometry and/or 16S ribosomal RNA (rRNA) gene sequencing.(Edelstein PH. Improved semi-selective medium for isolation of *Legionella pneumophila* from contaminated clinical and environmental specimens. J Clin Microbiol. 1981;14:298-303; CLSI. Interpretive Criteria for Identification of Bacteria and Fungi by Targeted DNA Sequencing. 2nd ed. CLSI Guideline MM18. Clinical and Laboratory Standards Institute; 2018)

## **PDF Report**

No

Day(s) Performed Monday through Sunday

Report Available 7 to 10 days

**Specimen Retention Time** 2 days

**Performing Laboratory Location** Mayo Clinic Laboratories - Rochester Main Campus

Fees & Codes

## Fees

# **Test Definition: LEGI**

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact <u>Customer Service</u>.

# **Test Classification**

This test has been cleared, approved, or is exempt by the US Food and Drug Administration and is used per manufacturer's instructions. Performance characteristics were verified by Mayo Clinic in a manner consistent with CLIA requirements.

# **CPT Code Information**

87081-Legionella culture
87077-Ident by MALDI-TOF mass spec (if appropriate)
87153-Aerobe ident by sequencing (if appropriate)
87176-Tissue processing (if appropriate)
