

Test Definition: BUTAS

Butalbital, Serum

Overview

Useful For Monitoring butalbital therapy

Method Name Gas Chromatography-Mass Spectrometry (GC-MS)

NY State Available Yes

Specimen

Specimen Type

Serum Red

Specimen Required

Supplies: Sarstedt Aliquot Tube, 5 mL (T914)
Collection Container/Tube: Red top (serum gel/SST are not acceptable)
Submission Container/Tube: Plastic vial
Specimen Volume: 1.5 mL
Collection Instructions:

Draw blood immediately before the next scheduled dose.
Within 2 hours of collection centrifuge and aliquot serum into a plastic vial.

Forms

If not ordering electronically, complete, print, and send a <u>Therapeutics Test Request</u> (T831) with the specimen.

Specimen Minimum Volume

0.6 mL

Reject Due To

Gross	ОК
hemolysis	
Gross lipemia	ОК
Gross icterus	ОК

Specimen Stability Information

Specimen Type Temperature	Time	Special Container
---------------------------	------	-------------------

Test Definition: BUTAS

Butalbital, Serum

Serum Red	Refrigerated (preferred)	28 days	
	Ambient	28 days	
	Frozen	28 days	

Clinical & Interpretive

Clinical Information

Butalbital, a short-acting barbiturate with hypnotic properties, is used in combination with other drugs such as acetaminophen, salicylate, caffeine, and codeine.(1)

Butalbital is administered orally. The duration of its hypnotic effect is about 3 to 4 hours. The drug distributes throughout the body, with a volume of distribution of 0.8 L/kg, and about 26% of a dose is bound to plasma proteins. The half-life of butalbital is about 35 to 88 hours. Excretion occurs mainly in the urine.(1,2)

Reference Values

Peak concentrations (100 mg single oral dose): 1.7-2.6 at 2 hours 1.3-1.7 at 24 hours Toxic concentration: > or =10 mcg/mL

Cutoff concentrations by gas chromatography mass spectrometry: Butalbital: 0.5 ng/mL

Interpretation

Butalbital concentrations of 10 mcg/mL or greater have been associated with toxicity.

Cautions

Specimens collected in serum gel tubes are not acceptable because the drug can absorb on the gel and lead to falsely decreased concentrations.

Performance

Method Description

Barbiturates are extracted from serum using solid-phase extraction techniques. The serum is buffered and eluted with

Test Definition: BUTAS

Butalbital, Serum

organic solvent. The organic phase is dried, reconstituted, and the analysis performed by gas chromatography-mass spectrometry using selected ion monitoring. The assay utilizes deuterated barbiturates as internal standards.(Unpublished Mayo method)

PDF Report

No

Day(s) Performed Thursday

Report Available 3 to 9 days

Specimen Retention Time 2 weeks

Performing Laboratory Location

Mayo Clinic Laboratories - Rochester Superior Drive

Fees & Codes

Fees

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact Customer Service.

Test Classification

This test was developed and its performance characteristics determined by Mayo Clinic in a manner consistent with CLIA requirements. It has not been cleared or approved by the US Food and Drug Administration.
