

Lead, Nails

#### Overview

#### **Useful For**

Detecting lead exposure using nail specimens

# **Special Instructions**

Collecting Hair and Nails for Metals Testing

#### **Method Name**

Triple-Quadrupole Inductively Coupled Plasma Mass Spectrometry (ICP-MS/MS)

NY State Available

# Specimen

Specimen Type Nail

# **Necessary Information**

Indicate source of nails (fingernails or toenails), if known

#### **Specimen Required**

Supplies: Hair and Nails Collection Kit (T565) Source: Fingernails or toenails

# Specimen Volume: 0.2 g

# **Collection Instructions:**

Prepare and transport specimen per the instructions in the kit or see <u>Collecting Hair and Nails for Metals Testing</u>.
Clippings should be taken from all 10 fingernails or toenails.

#### Specimen Minimum Volume

0.05 g

# **Reject Due To**

All specimens will be evaluated at Mayo Clinic Laboratories for test suitability

# **Specimen Stability Information**

| Specimen Type | Temperature         | Time | Special Container |
|---------------|---------------------|------|-------------------|
| Nail          | Ambient (preferred) |      |                   |
|               | Refrigerated        |      |                   |

# **Test Definition: PBNA**

Lead, Nails

Frozen

110201

# **Clinical & Interpretive**

# **Clinical Information**

Nail analysis of lead can be used to corroborate blood analysis.

#### **Reference Values**

<4.0 mcg/g of nails

Reference values apply to all ages.

#### Interpretation

Normally, the nail lead content is below 4.0 mcg/g. While nail lead content above 10.0 mcg/g may indicate significant lead exposure, nails are also subject to potential external contamination with environmental lead. Ultimately, the nail lead content needs to be interpreted in addition to the overall clinical scenario including symptoms, physical findings, and other diagnostic results when determining further actions.

#### Cautions

Blood lead analysis has the strongest correlation with toxicity.

#### Performance

#### Method Description

The metal analytes of interest are analyzed by triple-quadrupole inductively coupled plasma mass spectrometry.(Unpublished Mayo method).

PDF Report

No

Day(s) Performed Wednesday

Lead, Nails

#### **Report Available**

2 to 14 days

#### **Specimen Retention Time**

14 days

# **Performing Laboratory Location**

Mayo Clinic Laboratories - Rochester Superior Drive

# Fees & Codes

#### Fees

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact Customer Service.

# **Test Classification**

This test was developed and its performance characteristics determined by Mayo Clinic in a manner consistent with CLIA requirements. It has not been cleared or approved by the US Food and Drug Administration.

# **CPT Code Information**

83655
